Dear Hiring Manager,

I am writing to express my interest in joining your team in a software development role aligned with my background. With over 6 years of experience across full-stack development, backend engineering, REST APIs, database management, and DevOps — spanning Laravel, PHP, Java, Node.js, Express.js, React, Next.js, Vue.js, MySQL, PostgreSQL, Docker, AWS, Azure, and GCP — I am confident I can contribute immediately and adapt quickly to the specific needs of your engineering team.

In my current role as Senior Full Stack Software Developer (IT Manager) at Zaffran InfoTech Solution Pvt Ltd, I lead backend engineering for enterprise SaaS platforms built on ReactJS, Inertia.js, Laravel, and Filament, deployed through Docker-containerized microservices. I reduced API latency by 30% through optimization and Redis caching, and improved code review throughput by 40% by streamlining workflows and mentoring junior developers. I have also integrated international payment gateways and built secure REST APIs using OAuth and JWT authentication for both crypto and fiat currency transactions, supporting clients across the US, Thailand, and the APAC region.

Previously, at Coding Brains Software Solution Pvt Ltd, I built CRM and enterprise web applications for US-based clients and standardized coding practices across multiple project teams, while at Aara Technologies I developed real-time communication systems and REST APIs that powered global web and mobile applications. Across these roles, I have consistently combined strong technical execution with the ability to translate business requirements into reliable, maintainable systems.

I am drawn to opportunities where I can apply my backend architecture experience, payment systems expertise, and Agile leadership background to solve real engineering challenges at scale. I take pride in writing clean, maintainable code, mentoring teammates, and delivering features that hold up under production load. I also continue to invest in staying current with the field, recently expanding my skill set to include Node.js, Express.js, Next.js, and PostgreSQL, alongside completing training in multi-cloud DevOps (AWS, Azure, GCP) and Generative AI.

My resume and portfolio (linked above) provide further detail on my project work, including SaaS platforms, payment gateway integrations, and full-stack applications I have delivered end-to-end. I would be glad to discuss how my experience aligns with your team's needs. Thank you for your time and consideration.

Sincerely,

Dilip Kumar Gupta
